KIDUS ADMASSU

SOC Analyst & Web Development

Addis Ababa, Ethiopia | 0940255784 | kidusadmassu16995@gmail.com | linkedin.com/in/kidus-admassu | github.com/Nobby16

PROFESSIONAL SUMMARY

Information Systems graduate from Addis Ababa University with hands-on work across security operations (SOC), threat monitoring, and web development. Practical experience includes SIEM monitoring, alert triage, packet and log analysis, vulnerability assessment, and web security testing in isolated labs. Also experienced in developing web applications with React/Next.js, Node.js/Express, MongoDB, SQL, and role-based application features.

TECHNICAL SKILLS

Security Operations: Wazuh SIEM, alert triage, log analysis, network monitoring, packet analysis, endpoint hardening, threat intelligence, digital forensics, MITRE ATT&CK mapping — Hands-on

Security Tools: Wireshark, Zeek, Nmap, Burp Suite, OpenVAS, MISP, Autopsy, Sysmon, auditd — Hands-on

Systems & Infrastructure: Kali Linux, Linux, Windows security tooling, Docker, VirtualBox

Development: JavaScript, React.js, Next.js, Node.js, Express.js, MongoDB, SQL, Git, GitHub

Languages: Amharic (Native), English (Secondary)

SOC / CYBERSECURITY TRAINING

Qiyas Cybersecurity Training Program | QIYAS-2026-000154 *18 May 2026 - Ongoing*

Program Focus: Cybersecurity & Digital Risk Management

- Hands-on work: SIEM monitoring, network and traffic analysis, vulnerability assessment, web application security, threat intelligence, digital forensics, and secure development practices.
- Tools practiced across the lab: Wazuh, Wireshark, Zeek, Nmap, Burp Suite, Sysmon, auditd, MISP, Docker.

TECHNICAL PROJECTS

AutoShuppa — Automotive Spare Parts Marketplace

- Team-built web marketplace designed to connect buyers and spare-parts sellers through a centralized digital platform.
- Developed frontend and backend features for products, seller workflows, shopping cart, orders, and related marketplace functionality.

Technology used: Next.js, Node.js, Express.js, MongoDB, Vercel

AAU Dormitory Management System

- Final-year web application designed to digitize dormitory applications, room allocation, occupancy tracking, clearances, complaints, and administrative workflows.
- Designed role-based workflows for students, proctors, campus administrators, and super administrators, with allocation and waitlist logic.

Technology used: React.js, SQL Server

Blue Team SOC & Cybersecurity Lab

- Built and worked through an isolated multi-VM security environment for defensive monitoring and authorized testing practice.
- Covered endpoint telemetry, network traffic analysis, vulnerability scanning, SIEM detection and triage.

Technology used: Wazuh, Kali Linux, Wireshark, Zeek, Nmap, OpenVAS, Sysmon, MISP, Autopsy

EDUCATION

B.Sc. in Information Systems, Addis Ababa University *02/2023 – 06/2026*

Addis Ababa, Ethiopia
